

Date: February 20, 2025
Subject: TrackKing® February 2025 2.0 Release Notes
Location: e-Tech Library

Product: TrackKing.com, TrackKing Pro

Description: February 2025 2.0 release notes for the TrackKing website are listed below. These are in addition to what was released in [Service Bulletin SB973](#).

TrackKing Enhancements:

- Optimization of Short Running, Quick Reports, and Custom Reports
 - Doc and CSV export functionalities optimization done for short running, quick, and custom reports which increases report download speed.
- SSO Integration
 - Introduction of Single Sign-On (SSO) integration in the TrackKing portal and TKConnect app. This feature allows users to sign into their enterprise system and automatically be signed into the TrackKing website using their organization's credentials. The integration includes an SSO login button, a sign-in popup, and a process for validating user credentials. Upon successful validation, users will be logged in automatically, enhancing both security and user experience.

Note: The Single Sign-On (SSO) feature will be available only if your organization has set up SSO for the TrackKing system.

TrackKing Fixes:

- User Interface Issue Related to Reefer Utilization Report
 - Existing Behavior: When selecting the last 24 hours for reefer utilization data, the system provides 48 hours of data.
 - New Behavior: When selecting the last 24 hours for reefer utilization data, the system accurately provides data for the last 24 hours only.
- New User Screen - Login Username and Email Address Automatically Saved
 - Existing Behavior: By default, username and email address fields auto-populate with login email ID.

- New Behavior: Username and email address fields are empty.
- Unable to Add New Customers and Existing Customers Data not Displaying
 - Existing Behavior: Not able to create and edit customers.
 - New Behavior: The functions for creating and editing customers are now working as intended.
- Edit Customer Screen - UI Settings Option is Displaying
 - Existing Behavior: UI settings option is displayed under in Edit Customer screen.
 - New Behavior: The UI settings have now been removed from the Edit Customer screen.
- Reefer Utilization Report - Error message not Appearing when Selecting the Same Date Range
 - New Behavior: The error message appears when selecting the same date range for the Reefer Utilization Report.

APU Data APIs:

- We are releasing a new set of APIs designed to help our customers monitor and maintain their Auxiliary Power Units (APUs) more effectively. Data APIs provide comprehensive data to support the maintenance and monitoring of APUs.

Note: If access to the APU Data APIs is required, contact the TrackKing Support Team.

Best regards,

Telematics Support Team
